PROJECT NAME: Yellow House

COMPANY NAME : Joys Architects

COUNTRY: Thailand

PROJECT DESCRIPTION:

Yellow House, located in the Pak Chong district, was created to offer comfort for a family in close proximity to their cafe. The structure incorporates iconic raw concrete exteriors while maintaining an open and inviting interior, nestled beneath the canopies of mountain cedars, making a striking architectural statement.

PRODUCT : ATIS

## DESIGN CONCEPT:

The Yellow House, nestled amidst Thailand's Khao Yai Mountain, offers an idyllic setting, surrounded by tall trees and panoramic views. Designed with a focus on nature integration and homeowner privacy, this residence features four inner courtyards. These courtyards seamlessly blend the outdoor environment with the indoors and discreetly house the bedrooms. The house is divided into two sections: the "inner house" for bedrooms and the "outer house" for other functions. Each courtyard is thoughtfully designed at varying levels to harmonize with the natural terrain, preserving existing trees and serving unique purposes. These courtyards not only provide privacy but also visually and emotionally connect different parts of the house. They facilitate air circulation, invite natural sunlight, and offer captivating views, all within their concrete confines.
